

Mei Chai

UX Designer · AI-Driven Interaction & Product Design

Milano, Italy | +39 379 2076 803 | mei.chai@mail.polimi.it | [LinkedIn](#) | [Portfolio](#) | [GitHub](#)

PROFILE

Results-driven UX Designer and Politecnico di Milano alumna with 7+ years of end-to-end product design experience across AI ecosystems, consumer products, EdTech, and enterprise tools. Fluent in the full design-to-code pipeline — from user research and system design through to shipping front-end code directly via AI coding agents. Formally trained in No-Code AI & Machine Learning (Generative AI, RAG, Agentic AI workflows); expert at translating complex LLM capabilities into intuitive, human-centred interfaces that drive measurable business outcomes.

AI Focus: Vibe Design & Vibe Coding · Figma Make & MCP Workflow · Agentic UX · RAG & Multimodal Interfaces · LLM-Powered Interaction Design

SKILLS

- **Vibe Design & AI-Accelerated Prototyping** – Fluent in the 2026 designer toolkit: Figma Make, Lovable, Cursor, Pencil, and Bolt, skills; shipping interactive, production-ready prototypes in minutes without sacrificing design system consistency or UX rigour.
 - **End-to-End UI/UX Design** – Full-cycle ownership from research and wireframing to high-fidelity UI and usability testing; proven track record shipping AI-native products across B2B and consumer contexts that measurably improve engagement and conversion.
 - **AI-Driven Interaction & Conversational UX** – Designing multi-step reasoning flows, agentic interfaces, and conversational UX for LLM-powered products; translating RAG, MCP, and function-calling capabilities into intuitive, trust-building user journeys.
 - **No-Code AI & Data Literacy** – Trained in supervised/unsupervised learning, Generative AI, Prompt Engineering, RAG pipelines, and Agentic AI workflows using no-code platforms; able to prototype, evaluate, and brief AI solutions without reliance on a data science team.
 - **User Research & Behavioural Analysis** – Ethnographic fieldwork, interviews, persona development, NPS analysis, and large-scale behavioural insight synthesis; turning data into prioritised design decisions and roadmap impact.
 - **Design Systems & MCP Workflow** – Building scalable component libraries and using MCP to bridge Figma and AI coding agents (Cursor, Claude Code) with real design-system context — eliminating guesswork at developer handoff and ensuring pixel-level consistency at scale.
-

EXPERIENCE

Liba Space · Lead UX Designer (Remote)

Nov 2024 – Present

Design-to-code ownership of the Nova AI Ecosystem: ConnectNova, JobNova & CrackInterview — from UX strategy to front-end delivery

- Pioneered a vibe-coding-first design workflow for a fast-moving startup: designed, iterated, and delivered production-ready front-end code directly via AI coding agents (Cursor, Lovable), eliminating the traditional Figma-to-developer handoff and compressing iteration cycles from days to hours.
- Directed UX strategy and interaction framework across three AI products simultaneously; used Figma Make and MCP workflow to maintain design-system consistency across ConnectNova, JobNova, and CrackInterview while moving at startup speed.
- Architected conversational UX frameworks and multi-step AI reasoning flows, then shipped directly to production as front-end code — enabling developers to focus on back-end logic rather than UI implementation.

- Leveraged hands-on AI product knowledge (RAG pipelines, agentic workflows, Prompt Engineering) to collaborate as a technical peer with engineers — bridging the gap between design intent and AI system behaviour at the product level.
- Mentored a design intern on visual execution and UI refinement; established shared prompt libraries and component rules so AI-generated output stayed on-brand and on-system across the ecosystem.

Key Projects

- **ConnectNova.ai (B2B Sourcing):** Architected and shipped a Chrome-extension AI ranking engine that condenses LinkedIn candidate screening from 3 hours to 5 minutes; designed the interaction system and delivered front-end implementation directly via AI coding agents.
- **JobNova.ai (Job Hunting):** Led UX and front-end delivery for an all-in-one AI career hub — real-time job matching, AI-assisted applications, and resume-JD alignment visualisation — using vibe coding to ship and iterate at a pace no traditional handoff workflow could match.
- **CrackInterview.ai (AI Mock Interview):** Designed conversational logic spanning 50,000+ interview scenarios and built the visualised feedback dashboard UI; delivered as production front-end code, reducing developer back-and-forth by communicating in the language of the codebase.

CRRC Rolling Stock Research Institute · Interaction Designer (Internship)

Jul – Sep 2024

- Conducted on-site ethnographic research and deep-dive interviews with subway maintenance crews, mapping complex workflows and identifying critical friction points across the maintenance ecosystem.
- Re-engineered maintenance workflows and task-allocation logic, achieving a measurable reduction in operational redundancy and minimising human error in high-stakes environments.
- Revitalised information architecture and visual hierarchy to reduce cognitive tunnelling, delivering a more intuitive interface that supports rapid operator response during time-critical maintenance tasks.

Beijing Smart Walnut Education · User Research Specialist

Dec 2019 – Jun 2022

- Led end-to-end user research — persona development, journey mapping, and NPS analysis — shaping the product roadmap and brand strategy for a fast-growing online education platform.
- Transformed behavioural insights into product optimisations resulting in a 15% uplift in user engagement and measurable improvements in key conversion metrics.
- Optimised 50+ programming learning paths for children aged 4–12 through large-scale user research, improving study effectiveness by 20% and reducing system errors by 60%.
- Designed and launched new product features grounded in parental purchase-behaviour analysis (price, tutor quality, learning style, service), driving a 30% increase in sales.

Sohu Inc. · UX Designer

Nov 2017 – Dec 2019

- Designed core interaction flows for Huyou social media platform (feed streams and instant messaging), elevating user engagement at scale for one of China's leading technology companies.
- Independently conceptualised, designed, and launched Sohu Moke social tool from zero to 3,000+ daily active users post-launch.
- Restructured user account system and database to support real-name verification and account consolidation, improving backend scalability and reducing user management friction.
- Defined, documented, and maintained Sohu's interaction design principles and standards across multiple product teams, establishing a consistent design language at an organisational level.

EDUCATION

Politecnico di Milano · MSc Digital and Interaction Design

Sep 2022 – Jul 2025

QS 2026: #98 globally (Italy #1) · Art & Design #7 worldwide · #6 in Architecture globally

- One of Europe's leading technical universities; coursework spanning Interaction Design, Service Design, Data Visualisation, Digital Fabrication, and AI & Society.

Professional Development · No-Code AI & Machine Learning: Building Data Science Solutions

2025

- Intensive programme covering supervised & unsupervised learning, deep learning fundamentals, Generative AI & Prompt Engineering, RAG pipelines, Agentic AI workflow design, and responsible AI principles — applied hands-on using no-code platforms.

Jilin University · BA (Equivalent)

2017

QS 2025: #497 globally · 985 / 211 / Double First-Class (A) University · Soft Science China Ranking: #26

- One of China's leading comprehensive research universities, designated as a national key university under the Ministry of Education; strong interdisciplinary foundation in analytical and systems thinking.
