

# Mei Chai

Product Designer · AI-Native Products, Design Systems & Vibe Coding

Milano, Italy | +39 379 2076 803 | [mei.chai@mail.polimi.it](mailto:mei.chai@mail.polimi.it) | [LinkedIn](#) | [Portfolio](#) | [GitHub](#)

---

## PROFESSIONAL SUMMARY

---

Product designer with 7+ years of end-to-end experience across AI ecosystems, consumer, EdTech, and enterprise products. Specializes in translating AI/LLM capabilities (RAG, agentic workflows, multi-step reasoning) into simple, trustworthy user experiences — and shipping them directly as production front-end (and, via AI coding agents, back-end) code, compressing design-to-development handoff from days to hours. Formally trained in No-Code AI & Machine Learning (Generative AI, RAG, Agentic AI). Builds and maintains scalable design systems across multi-product portfolios, working as a technical peer to engineering.

## KEY SKILLS

---

- **AI-Native Product Design** — end-to-end design of conversational UX, agentic workflows, and RAG-based interactions across three live AI products
- **Vibe Design & AI-Accelerated Prototyping** — Figma Make, Cursor, and Claude Code for prototyping and front-end delivery, plus GPT Image for AI-generated visuals; ships interactive, production-ready front-end (and, via AI coding agents, back-end) code without a traditional design-to-dev handoff
- **Design Systems & MCP Workflow** — builds scalable component libraries (components, variables) and uses MCP to give AI coding agents real design-system context, keeping multi-product portfolios pixel-consistent at speed
- **User Research & Behavioural Analysis** — ethnographic fieldwork, interviews, persona/journey mapping, NPS analysis, and post-launch validation tracking (PostHog); turns findings into prioritized roadmap decisions
- **No-Code AI & Data Literacy** — trained in supervised/unsupervised learning, Generative AI, Prompt Engineering, RAG pipelines, Agentic AI workflows; can prototype, evaluate, and brief AI solutions independently

## EXPERIENCE

---

### Lead UX Designer (Remote) | *Liba Space*

Nov 2024 – Present

*Design-to-code ownership of the Nova AI Ecosystem: ConnectNova, JobNova & CrackInterview*

- Pioneered a vibe-coding-first workflow: designed, iterated, and shipped production front-end code directly via AI coding agents (Cursor, Claude Code), cutting iteration cycles from days to hours and eliminating the Figma-to-developer handoff
- Directed UX strategy and interaction framework across three concurrent AI products; used MCP to keep ConnectNova, JobNova, and CrackInterview on one consistent design system at startup speed
- Architected conversational UX and multi-step AI reasoning flows, then shipped them directly to production — freeing engineers to focus on back-end logic instead of UI implementation
- Applied hands-on knowledge of RAG pipelines, agentic workflows, and prompt engineering to work as a technical peer with engineers, bridging design intent and AI system behavior
- Mentored design interns on visual execution; built shared prompt libraries and component rules that kept AI-generated output on-brand and on-system

### Key Projects

- **ConnectNova.ai** (B2B Sourcing): designed and shipped an AI-powered recruiting platform that turns LinkedIn sourcing into a structured workflow — candidate collection, ranking, review, and outreach — cutting screening time from 3 hours to 5 minutes
- **JobNova.ai** (Job Hunting): led UX and front-end delivery for an AI career hub — real-time job matching, AI resume generation, and Auto Apply, powering 1,800+ successful applications per week at an 88%+ success rate
- **CrackInterview.ai** (AI Mock Interview): designed conversational logic for 50,000+ interview scenarios and built the visualized feedback dashboard, cutting developer back-and-forth by communicating directly in code

### Product Designer | *DEF Beauty (Milano)*

May 2026 – Present · Part-time

- Independently owned research, design, and delivery for the rebuild of a wholesale distributor's order-management platform, using AI coding agents to ship both front-end and back-end (Supabase, Cloudflare Workers)
- Identified data fragmentation as the root cause of recurring order errors and shipped a real-time sync fix that cut the ordering flow from 5 steps to 3
- Designed and implemented a role-based access system (four roles, each scoped to relevant data and actions) to support secure, structured multi-user operations

- Owned the full path from problem discovery to deployment solo, applying No-Code AI training to brief and validate the technical approach without a dedicated engineering team

### User Research Specialist | *Beijing Smart Walnut Education*

Dec 2019 – Jun 2022

- Led end-to-end user research (personas, journey mapping, NPS) that shaped product roadmap and brand strategy, driving a 15% uplift in user engagement
- Optimized 50+ programming learning paths for children aged 4–12, improving study effectiveness by 20% and reducing system errors by 60%
- Designed features grounded in parental purchase-behavior analysis (price, tutor quality, learning style, service), driving a 30% increase in sales

### UX Designer | *Sohu Inc.*

Nov 2017 – Dec 2019

*NASDAQ-listed Chinese internet company (SOHU)*

- Designed core interaction flows for the Huyou social platform (feed streams, instant messaging) at national scale
- Independently conceived, designed, and launched Sohu Moke, a social tool that reached 3,000+ daily active users
- Defined and maintained Sohu's interaction design standards across multiple product teams, establishing a consistent design language

## EDUCATION

---

**MSc Digital and Interaction Design** | Politecnico di Milano (Sep 2022 – Jul 2025)

*QS 2026: #98 globally (Italy #1) · Art & Design #7 worldwide*

**No-Code AI & Machine Learning: Building Data Science Solutions** | Professional Development (2025)

**BEng (Equivalent)** | Jilin University (2017)

## LANGUAGES

---

English (Fluent) · Italian (Beginner) · Chinese (Native)
